

Nathaniel Blaiklock

AI Engineer | Senior Full Stack Developer

Building AI-powered products and scalable web applications

Experienced AI Engineer and Senior Full Stack Developer with a strong track record of building and scaling web and mobile applications, integrating OpenAI and other AI APIs, and delivering high-quality backend and frontend solutions. Skilled in modern programming languages, cloud technologies, and AI model evaluation. Passionate about AI, problem-solving, and creating reliable, user-focused products.

TECHNICAL SKILLS

Programming Languages	Python, TypeScript, JavaScript, C++, Java, Rust, Go, SQL, Bash
AI / LLM	OpenAI API, LLM Integration, Prompt Engineering, LLM Evaluation, AI Code Evaluation, AI Agent Evaluation, Function/Tool Calling, RLHF Concepts, Model Response Ranking
Backend Development	Python, Node.js, REST APIs, API Integration, Microservices, Authentication, MySQL, PostgreSQL, Redis
Frontend Development	React, Next.js, TypeScript, JavaScript, HTML5, CSS3
Testing & Code Quality	Pytest, Jest, Unit Testing, Integration Testing, Code Review, Debugging, Test-Case Design, Regression Testing, Edge-Case Analysis
DevOps & Tools	Docker, Linux, Git, GitHub, CI/CD, GitHub Actions, Bash, Cloud Deployment
AI Training & Evaluation	AI-Generated Code Review, Coding Agent Evaluation, Rubric Design, Response Ranking, Reference Solutions, Failure Analysis, Agent Trace Analysis, Tool-Use Evaluation, Adversarial Testing
Computer Science	Algorithms, Data Structures, OOP, Software Architecture, Performance Optimization, Refactoring, Distributed Systems

WORK EXPERIENCE

AI Engineer | Senior Full Stack Developer

Nov 2016 – Mar 2026

Vancouver, Canada

First National Financial Corporation

- AI & Machine Learning
Built AI-powered applications using Python, machine learning, deep learning, NLP, and computer vision.
Developed LLM-based solutions including AI assistants, document processing, information extraction, classification, and automated workflows.
Integrated OpenAI and other AI/LLM APIs into web applications and backend services.
Worked with prompt engineering, structured outputs, embeddings, vector databases, and RAG pipelines.
Developed data preprocessing, labeling, validation, and model evaluation workflows.
Built computer-vision solutions using OpenCV for image matching, feature detection, similarity analysis, and image processing.
Created Python automation and data-processing pipelines for large datasets.
- Full Stack Development
Developed production applications using React, TypeScript, JavaScript, PHP, Laravel, Yii2, Vue.js, Python, and Node.js.
Designed REST APIs, backend services, authentication systems, dashboards, and complex business workflows.
Built responsive and modern user interfaces with React, Vue.js, HTML5, CSS3, and JavaScript.
Designed scalable application architectures using modular development, DDD, and reusable components.
Integrated third-party APIs, payment systems, email services, cloud storage, and external business platforms.
- Cloud, Data & Backend Engineering
Hands-on experience with AWS services including S3, SQS, SNS, and cloud-based application infrastructure.
Worked extensively with PostgreSQL, TimescaleDB, MySQL, DynamoDB, Redis, and SQLite.
Developed high-volume data processing and IoT analytics systems supporting hundreds of thousands of connected devices.
Implemented background jobs, queues, caching, event-driven processing, monitoring, and performance optimization.
Experience with Docker, Linux/Ubuntu, Git, CI/CD workflows, and production deployments

EDUCATION

Simon Fraser University

Burnaby, British Columbia, Canada
Graduated: 2016

Bachelor's Degree in Computer Science
